                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Cloning and molecular characterization of mouse bcl-x in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domains are required for both heterodimerization with other Bc12 family members and for repression of cell death. PTM: Proteclytically cleaved by caspases during apoptosis (By similarity). The cleaved protein, lacking the BH4 domain, has protected activity (By similarity). CONTAINS 1 BC1-2 HOMOLOGY DOMAIN 1 (BH1). SIMILARITY: CONTAINS 1 BC1-2 HOMOLOGY DOMAIN 2 (BH2). SIMILARITY: CONTAINS 1 BC1-2 HOMOLOGY DOMAIN 3 (BH3). SIMILARITY: BELONGING TO THE BC1-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ISOFORM promotes apoptosis.

SUBUNIT: Bcl-x(L) forms heterodimers with BAX, BAK and Bcl-2 (By similarity). Heterodimerization with BAX does not seem to be required for anti-apoptotic activity (By similarity).

SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANES AND PERINUCLEAR ENVELOPE FOR BCL-X(L). CYTOPLASMIC FOR BCL-X(DELTA-TM).

ALTERNATIVE PRODUCTS: 4 ISOFORMS; BCX-X(L) (SHOWN HERE), BCL-X(S),

                                                                                                                                                                  The BH1 and BH2 domains are required for both heterodimerization with other Bcl2 family members and for repression of cell death. PTM: Proteolytically cleaved by caspases during apoptosis. The cleaved protein, lacking the BH4 domain, has pro-apoptotic activity (By similarity).

SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 1 (BH1). SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 2 (BH2). SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3). SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3). SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 4 (BH4).
                                                                                                                                                                                                                                                                                                                                           SPECIFICALLY EXPRESSED IN CEREBELLUM, HEART, AND THYMUS. IN THE OVARY, THE PREDOMINANT FORM IS BCL-X(L), WITH A SMALL BUT DETECTRALE LEVEL OF BCL-X(S).

DOMAIN: The BH4 domain is required for anti-apoptotic activity. The BH1 and BH2 domains are required for both heterodimentration.
                                                                                                                                                                                                                                                                                                                                                                                                                             ALTERNATIVE PRODUCTS: 3 ISOFORMS; BCL-X(L) (SHOWN HERE), BCL-X(S) AND BCL-X(BETA); ARE PRODUCED BY ALTERNATIVE SPLICING. TISSUE SPECIFICITY: EXPRESSED IN MOST TISSUES. BCL-X(BETA) IS SPECIFICALLY EXPRESSED IN CEREBELLUM, HEART, AND THYMUS. IN THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytochrome c, from the mitochondrial membrane. The Bc1-x($) are Bc1-x(beta) isoforms promote apoptosis.
SUBUNIT: Bc1-x(b) forms heterodimers with BAX, BAK and Bc1-2 (similarity). Heterodimerization with BAX does not seem to be required for anti-apoptotic activity (By similarity).
SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANES AND PERINUCLEAR SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANES AND PERINUCLEAR ELVELOPE (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   BIOL. Chem. 272:27886-27892(1997).
FUNCTION: Potent inhibitor of cell death. Inhibits activation caspases (By similarity). Appears to regulate cell death by blocking the volatage-dependent anion channnel (VDAC) by bindi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bc1-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     to it and preventing the release of the caspase activator,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 structure of rat Bcl·xL. Implications for the function 2 protein family.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Chem.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        promotes apoptosis in promyeloid 271:13258-13265(1996).

"Modulation of cell death bx Bcl-xL through caspase interaction.";

Proc. Natl. Acad. Sci. U.S.A. 95:554-559(1998).

-I- FUNCTION: Pottent inhibitor of cell death. Inhibits activation of caspases (By similarity). Appears to regulate cell death by blocking the volatage-dependent anion channel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane. The Bcl-x(S)

TISSUE SPECIFICITY: BCL-X(S) IS EXPRESSED AT HIGH LEVELS IN CELLS
THAT UNDERGO A HIGH RATE OF TURNOVER, SUCH AS DEVELOPING
LYMPHOCYTES: IN CONTRAST, BCL-X(L) IS FOUND IN TISSUES CONTAINING
LONG-LIVED POSTMITOTIC CELLS, SUCH AS ADULT BRAIN.

DOMAIN: The BH4 domain is required for anti-apoptotic activity.
The BH1 and BH2 domains are required for both heterodimerization
with other Bcl2 family members and for repression of cell death.
PTM: Proteolytically cleaved by Caspases during apoptosis. The
cleaved protein, lacking the BH4 domain, has pro-apoptotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 1 (BH1).

ALTERNATIVE PRODUCTS: 2 isoforms; TDT-L(arge)/TdtL (shown here) and TDT-S(mall)/TdtS; are produced by alternative splicing. The TDT-S form is the major form.

SIMILARITY: BELONGS TO DNA POLYMERASE TYPE-X FAMILY.

SIMILARITY: CONTAINS 1 BRCT DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        modulate the function of TdtS.

CATALYTIC ACTIVITY: N deoxynucleoside triphosphate + [deoxynucleotide](M) = N diphosphate + [deoxynucleotide](M+N).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: TEMPLATE-INDEPENDENT DNA POLYMERASE WHICH CATALYZES THE RANDOM ADDITION OF DEOXYNUCLEOSIDE 5'-TRIPHOSPHATE TO THE 3'END OF A DNA INITIATOR. ONE OF THE IN-VIVO FUNCTION OF THIS ENZYME IS THE ADDITION OF WICLEOTIDES AT THE JUNCTION (N REGION) OF REARRANGED IG HEAVY CHAIN AND T CELL RECEPTOR GENE SEGMENTS DURING THE MATURATION OF B AND T CELLS. The Tdtl isoform seems to serve to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     384 TFEKFKQPSRKVDALDHFQK--CFLILK--LDHGRVHSEKSGQQEGK--GWKAIRV 433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     226 KLKKDKA-----LMGHFQDGLSYSVFKTITDQVLMGVDPRGESEVKAQGFKAALV 275
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              similarity). Heterodimerization with BAX does not seem required for anti-apoptotic activity (By similarity). SUBCELLULAR LOCATION: MITOCHONDRIAL MEMBRANES AND PERI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Potent inhibitor of cell death. Inhibits activation of caspases (By similarity). Appears to regulate cell death by blocking the volatage-dependent anion channel (VDAC) by binding to it and preventing the release of the caspase activator, cytochrome c, from the mitochondrial membrane.

Chem. 270:9327-9333(1995).

FUNCTION: BINDS TO TYPE II REGULATORY SUBUNITS OF PROTEIN KINASE AND ANCHORS/TARGETS THEM TO THE NUCLEAR MEMBRANE OR SARCOPLASMIC RETICULUM. MAY ACT AS AN ADAPTER FOR ASSEMBLING MULTIPROTEIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  send an email to license@isb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (CALCINEURIN) AND AKAP79.
SUBCELLULAR LOCATION: SARCOPLASMIC RETICULUM AND NUCLEAR MEMBRANE IN HEART MUSCLE. PARTICIPATION OF MULTIPLE TARGETING SIGNALS ALLOW CORRECT INTRACELLULAR TARGETING. THESE MAY BE REPEATED MOTIFS RICH IN BASIC AND HYDROPHOBIC AMINO ACIDS, PALMITOYLATED/MYRISTOYLATED MOTIFS OR ALTERNATIVELY SPLICE TARGETING SEQUENCES.
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN CARDIAC AND SKELETAL MUSCLE, FOLLOWED BY BRAIN.
DOMAIN: RII-ALPHA BINDING SITE, PREDICTED TO FORM AN AMPHIPATHIC DOMAIN: RII-ALPHA BINDING SITE, PREDICTED TO FORM AN AMPHIPATHIC HELIX, COULD PARTICIPATE IN PROTEIN-PROTEIN INTERACTIONS WITH A COMPLEMENTARY SURFACE ON THE R-SUBUNIT DIMER.
SIMILARITY: CONTAINS 2 SPECTRIN REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBUNIT: INTERACTS WITH RII SUBUNIT OF PKA, PHOSPHATASE 2B

APOPTOTIC MEMBERS OF THE BCL-2 FAMILY.

SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 1 (BH1).

SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 2 (BH2).

SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3).

SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: ACCELERATES PROGRAMED CELL DEATH BY BINDING TO, AND ANYAGONIZING THE APPOPOSIS REPRESSOR BCL-2 OR ITS ADENOVIRUS HOMOLOG EIB 19K PROTEIN. INDUCES THE RELEASE OF CYTOCHROME C, ACTIVATION OF CASPASE-3, AND THEREBY APOPTOSIS. BAX DEFICIENCY LEADS TO LYMPHOID HYPERPLASIA AND MALE STERILITY, BECAUSE OF THE CESSATION OF SPERM PRODUCTION.
SUBUNIT: FORMS HOMOLIMERS AND HETERODIMERS TOGETHER WITH BCL-2, E1B 19K PROTEIN, BCL-X(L), MCL-1 AND A1.
SUBCELLULAR LOCATION: Membrane-bound.
ALTERNATIVE PRODUCTS: A 21 KDA MEMBRANE PROTEIN ALPHA AND THE TWO CYTOPLASMIC PROTEINS BETA AND GAMMA ARE GENERATED BY ALTERNATIVE

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
